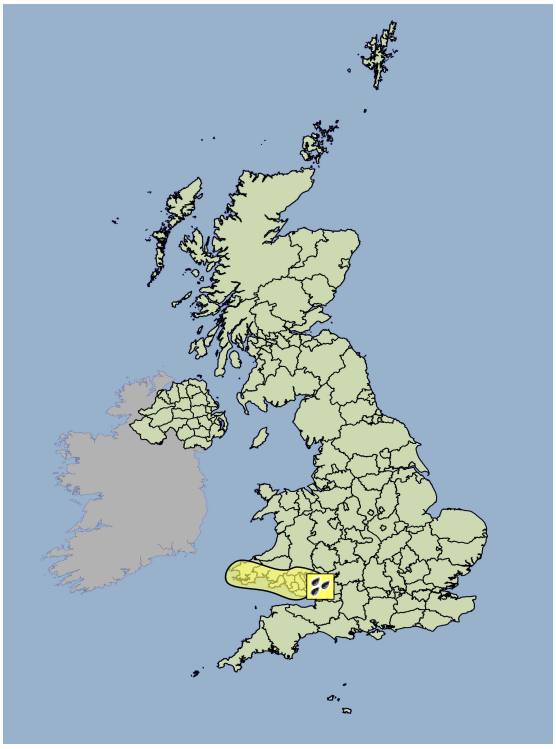
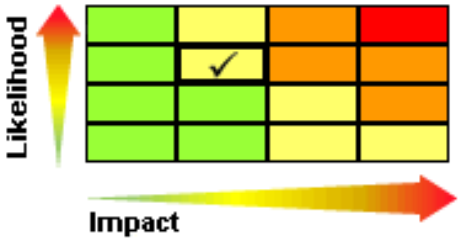
National Severe Weather Warning Service





Chief Forecasters Assessment
A further active system will drive northeastwards during the first half of Saturday, bringing 3 to 6 hours of heavy rain to parts of south Wales. A further 20 to 30 mm of rain is expected, a few places perhaps receiving a little more. Coming on top of Friday's very wet conditions, the ground will be saturated, giving rise to the risk of surface water flooding, primarily affecting travel.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **08:00 on Sat, 08th Nov 2014** until **14:00 on Sat, 08th Nov 2014**

Following Friday's heavy rainfall, and a showery night to come, another band of heavy and squally showers is expected to cross Wales during Saturday morning, before clearing eastwards into the afternoon.

The heaviest rain is expected to affect southern parts of Wales, where the public should be aware of the likelihood of difficult driving conditions, due to heavy rain, gusty winds and spray. Some surface water flooding is also possible.
